

Do I Need Access Control?

Ideal for those that

- Are concerned that a lost/stolen key is an immediate security threat
- Need clients, guests and employees to have different access privileges
- Need to restrict or allow access based on time or day
- Want to automate the unlocking and locking of doors
- Want to record when clients, guests and employees enter or leave a door
- Want to be alerted if door is left open or forced open
- Need immediate lockdown of doors upon a threat
- Want their clients, guests and employees to be more secure
- Want to protect high value areas

Ideal for

- Schools
- Banks
- Health Care
- Gyms/Recreation Facilities
- Managed Properties/Housing/Communities
- Hotels
- Office Buildings

Better Value, Best Fit For YOU

Devices

- Proximity Cards
- Proximity Readers
- Keypads
- ID Badges
- Video Intercoms
- Door Locks
- Gates
- Elevators
- And much more

More Features

- Time and Attendance Reporting
- Security Round Reporting
- Mobile Monitoring
- Automated Reporting
- Single Use/Multiday codes or cards
- Asset Tracking
- Multi-Site Management

Benefits

- **Audit trail** – With an access control system, you will have a record of every opening and attempted opening of each door or area. The audit trail can be valuable in resolving employee issues, such as time card disputes.
- **Time/day restrictions** – Do you have certain employees that should only be there at certain times and days. One example is your janitorial staff. If they only come one or twice a week at night, it makes more sense to restrict their access to those times than to give them a key that allows access at any time or day.
- **Lost or stolen keys** – When keys are lost, stolen or not returned by former employees, it is an expensive process for a business to completely rekey each door. And it can be a security risk if the locks are not rekeyed. Access control systems allow you to easily remove access by deactivating the I.D. badge or other security credential. This can save your business time and money and prevent losses.
- **Remote access control** – Many systems allow for control of all of the business' locks from one main system. With these systems, you can easily and quickly lock down your business in an emergency as well as add and remove credentials.
